1. Proposal One – Tshipidi Bakery

1.1 Organisation Overview

Tshipidi Bakery is a fictional small business based in Polokwane, Limpopo, specialising in fresh bread, cakes, cupcakes, biscuits and custom celebration cakes. The bakery was established in 2021 by a local baker who wanted to provide affordable, freshly made baked goods for households, schools, offices and community events. The business currently depends mainly on walk-in customers, WhatsApp enquiries and word-of-mouth recommendations. A strong online presence can help a small business communicate its products and services more effectively to potential customers.

Its mission is to provide fresh, attractive and affordable baked products while delivering friendly customer service. Its vision is to become a trusted local bakery with a strong online presence and a convenient ordering process. The target audience includes families, students, office workers, schools, event organisers and customers looking for birthday or celebration cakes. Identifying a clear target audience is important because website content and navigation should be designed around users' needs and expectations.

1.2 Website Goals and Objectives

The proposed website will create a professional online presence and make it easier for customers to discover products, view prices and request orders. The website will also reduce repeated enquiries by presenting product information clearly. Clear information architecture and accessible web content contribute to a better user experience.

Increase online visibility and customer enquiries.

Display products, prices and cake options in an organised catalogue.

Provide a simple order/enquiry form and WhatsApp contact option.

Promote custom cakes and seasonal specials.

Measure success through website visits, enquiry submissions, WhatsApp clicks and completed orders.

1.3 Current Website Analysis

Tshipidi Bakery does not currently have a dedicated website. Its main strengths are its local reputation, product quality and direct communication with customers. However, the absence of a website makes it difficult for new customers to find reliable information about the bakery, compare products and place enquiries outside normal business communication channels. The proposed site will address these weaknesses with a mobile-friendly product catalogue, clear contact information and an enquiry form. Responsive design is important because websites should remain usable across different screen sizes and devices.

1.4 Proposed Website Features and Functionality

Home page with a bakery introduction, featured products and call-to-action buttons.

About page containing the bakery story, mission and values.

Products page with categories, descriptions and indicative prices.

Custom Cakes page showing cake types and an enquiry form.

Gallery page for product photographs.

Contact page with phone/WhatsApp details, email and location.

Responsive navigation so the website works on desktop, tablet and mobile devices.

1.5 Design and User Experience

The design will be warm, clean and modern to reflect a friendly bakery brand. The proposed colour palette is cream, soft brown and a muted accent colour. Typography will use Aptos for body text and a clear bold heading style for hierarchy. The layout will use large product images, short descriptions, clear buttons and consistent navigation. Accessibility will be supported through readable text, sufficient contrast, descriptive image alternative text and simple forms, in line with recognised accessibility principles (Google, 2026).

1.6 Technical Requirements

Domain: a suitable domain such as tshipidibakery.co.za, subject to availability.

Hosting: an entry-level South African or international shared hosting package.

Front end: HTML5, CSS3 and JavaScript.

Optional framework: Bootstrap for responsive layout components.

Images: compressed JPG/PNG/WebP files for faster loading.

Testing: desktop and mobile browsers, links, forms, navigation and basic accessibility.

1.7 Timeline and Milestones

Week	Milestone	Deliverable
1	Research and planning	Proposal, requirements and content plan
2	Wireframing and design	Low-fidelity wireframes and style direction
3	Development	HTML/CSS pages and initial JavaScript

4	Content and testing	Images, product content, responsive and usability testing
5	Finalisation	Corrections, documentation and final website submission

1.8 Budget

Item	Estimated Cost (ZAR)
Domain registration (annual)	R180
Basic hosting (annual)	R1,200
Website development	R3,500
Logo/graphics and image preparation	R500
Annual maintenance allowance	R1,200
Estimated first-year total	R6,580

The amounts are estimates for planning purposes and can change according to the selected hosting provider, domain availability and whether the client supplies branding and images. Actual costs should be confirmed from current provider quotations before implementation.

1.9 Low-Fidelity Wireframe

Homepage structure:

Header: Logo | Home | About | Products | Gallery | Contact

Hero section: Bakery name + short message + View Products button

Featured products: Product card | Product card | Product card

About preview: Short introduction + Learn More button

Call to action: Request a Custom Cake

Footer: Contact details | Social links | Copyright

Product page structure:

Header and navigation

Product category heading

Product cards with image, name, description and price

Order/Enquiry button

Footer with contact information
